WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

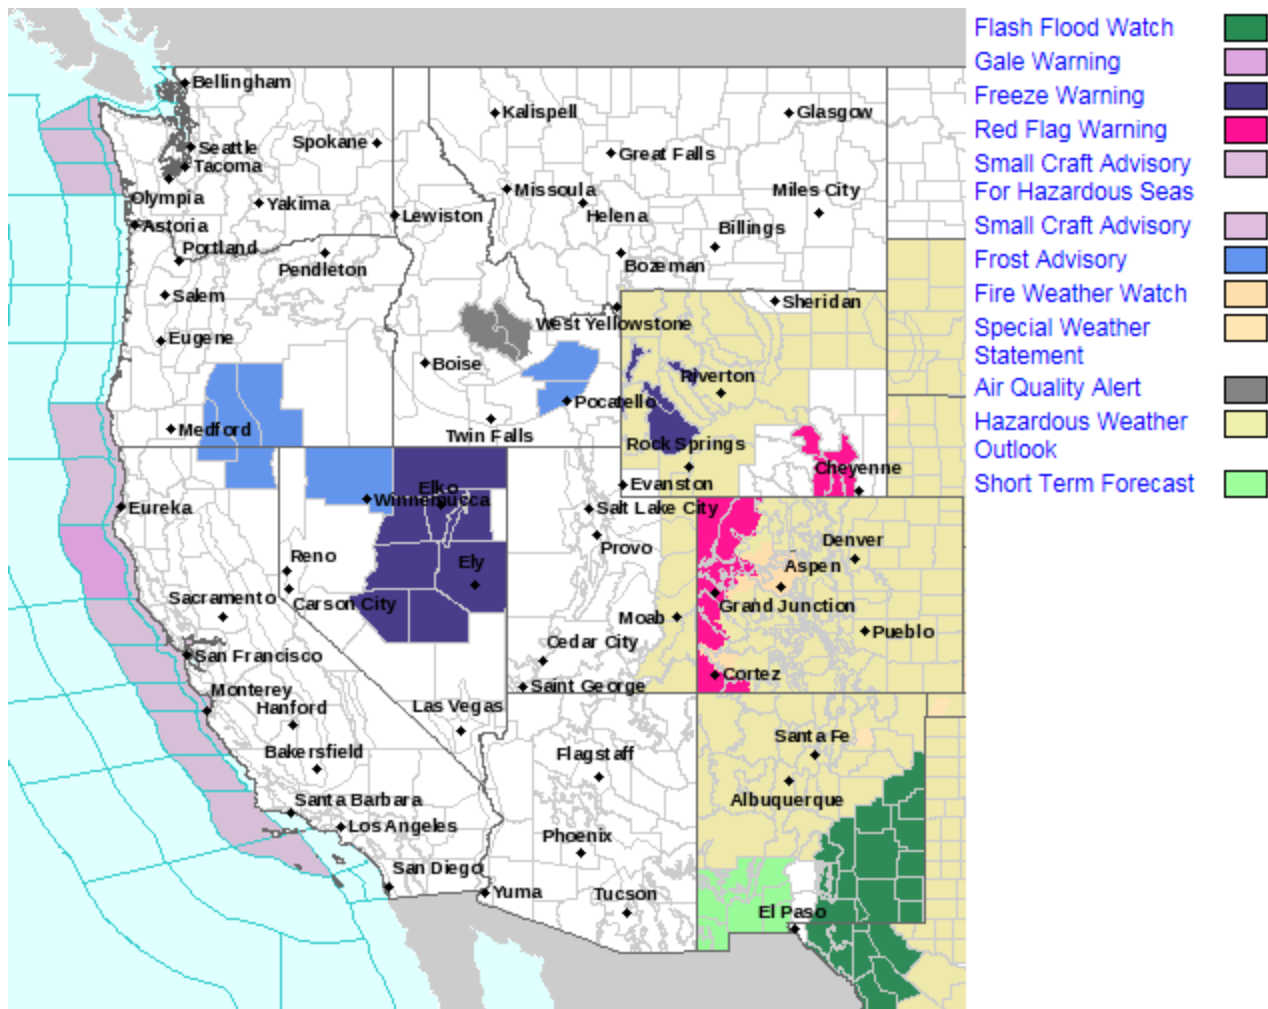

The low pressure through that has dominated Northern California weather for the past several days is moving over the Great Basin today. As it continues moving east this week strong high pressure over the Eastern Pacific will gradually have more influence over our weather. There will be a few scattered mid and high clouds in the north each day through Wednesday, but showers or thunderstorms are unlikely. By Wednesday the trough will be over the Rockies and a dry NW flow aloft will be over Northern California. A warming trend will bring afternoon temperatures up to near normal by Wednesday and above normal late in the week. A daily combination of night and morning N to NE downslope winds gusting to 20-25 mph with decreasing relative humidity (RH) recovery in the Sacramento Valley and adjacent foothills is the biggest fire weather concern developing this week. Gust speeds may locally reach 30 mph some mornings. RH recovery will be to 20-40% in and around the Sacramento Valley. Afternoon RH's all week will also be decreasing with fairly widespread values of 8-15% expected. Mid and upper slopes in far NW California will also experience periods of NE/offshore winds gusting to 20-30 mph and poor RH recovery during nights and mornings this week. The marine layer will gradually become more shallow, but still move into coastal basins and drainages from Mendocino or Sonoma County south each evening. Farther north, a stronger offshore push at times will keep the marine layer closer to the coast.

SOUTHERN CALIFORNIA

Westerly winds of 15 to 25 mph with gusts to 40 mph will surface across the east sides of the San Bernardino and Cleveland National Forests through this evening as strong onshore flow continues across the southern half of Southern California. A Pacific trough over the West Coast will maintain well below normal temperatures today, with mid 60s to mid 70s across the mountains and upper 70s and 80s in the valleys. The marine layer remains between 3,000 and 4,000 feet deep across Southern California this morning, with low clouds and fog over the lower coastal mountain slopes. Minimum humidity will be mainly between 12% and 25% above and inland from the marine layer today, but there will be single digits and low teens over the Cleveland National Forest. Significant warming will occur Tuesday and Wednesday as high pressure builds into California from the Pacific. Temperatures will become near normal by Wednesday. The marine layer will shrink rapidly after today, with morning low clouds and fog only moving over the coastal areas by Wednesday. Minimum humidity will drop into the single digits and teens above and inland from the marine layer Tuesday and Wednesday. A weak low will form off the California Coast keeping temperatures near normal Thursday through this weekend. Minimum humidity will increase back into the 12% to 25% range Thursday through this weekend. Moisture from Tropical Storm Newton may bring isolated showers and thunderstorms to the Colorado River Wednesday, but most of the shower and thunderstorm activity with this tropical storm will stay to the east over Arizona.
